

# Optimal Decisions Group

## Consultant

Optimal Decisions Group is an innovative, entrepreneurial consulting firm that helps insurers make more profitable customer-level decisions. ODG thrives on being at the cutting edge of analytical techniques. We have offices in Australia and the USA. In response to strong demand, we are in search of outstanding candidates for Consultant roles.

This business-intelligence position offers a rare mix of analytics, software and consulting, and affords the opportunity to develop an array of valuable skills while contributing directly to our clients' bottom line. Our clients work with high-dimensional data and models with many degrees of freedom; our job is to give them clear, actionable advice. As a newly acquired subsidiary of LexisNexis, we have access to a wealth of data resources which will mean better business decisions for our clients and new and exciting opportunities for our consultants.

For the candidate: the primary prerequisite is the ability to learn and communicate complicated subject matter in a clear and concise manner. Some familiarity with programming will also be useful.

### Responsibilities:

- Assist and eventually lead consulting case teams working with the pricing departments of top tier insurers to gather and cleanse large scale transactional datasets, build sophisticated models, configure our software, and design new prices.
- Manage client expectations and scope, report progress, and reconfigure projects as needed.
- Participate in the software, product development, and sales processes.

### Requirements:

- Excellent communication skills
- Strong numeracy / analytics
- Excellent university record
- Pragmatism: avoid 'reinventing the wheel' but also learn new skills quickly
- Self-motivation to work effectively with colleagues in a small, but fast-developing group

### Having the following will be considered advantageous:

- Strategic or analytical consulting experience at a top tier consulting firm
- Postgraduate qualifications
- Familiarity with software engineering principles
- Experience working on large, transactional datasets
- Programming skills

### Our offer:

- A true meritocracy; be judged on quality, not time spent or location
- A rare opportunity to apply quantitative skills in a strategic consulting environment
- Work alongside bright clients on large, collaborative engagements
- A highly competitive salary
